8. Additional Notes or Comments
3 GeoKon vibrating wire piezometers were installed upon drilling completion. The VWP sensors and cables were secured every 10 LF to a steel guide pipe set at 1,617 ft. The probes were positioned at 1,550 ft, 1,220 ft, and 590 ft. The installation and backfill were completed using fully grouted methods from pumping grout from bottom of borehole to surface in one continuous lift. After 18 hrs of set time, the cement bentonite grout ratio of 2.5:1:0.3 was tagged at a depth of 52ft at this point. Neat cement was then pumped through 2" pipe to surface then the tremie pipe was pulled. See attached page 2 for further note.
