

The Nevada Division of Minerals Open Data Site and the C.L.A.I.M.S. Hub: Utilities and Data for Land Research, Public Outreach/Education, and Land Withdrawal Analysis for Nevada and Beyond

Lucia Patterson M.S. C.P.G. R.L. (AKA the Nevada Data Miner), Nevada Division of Minerals

Overview

- $\,$ Introduce the Open Data/Hub Sites
- \bigotimes Web maps for basic land research
- ☆ Mineral Rights Story Map
- 🖄 Nevada Mineral Explorer
- ☆ Multiple Use Conflict Analysis Experience

The Nevada Division of Minerals Open Data Site

- AML Program requires lots of land ownership research to contact owners/claimants, to let them know a dangerous condition exists, and to get the condition secured.
- NDOM strives to provide data on lands proposed for withdrawal from mineral entry in Nevada.
- As a result, we had several tools and data sets we used for land research.
- ☆ When open data sites were made available, we knew we could leverage the platform to assist the public by making the tools we had available to the public...so we staked a claim on an open data site in 2017.

Mission: To encourage and assist in the responsible exploration for, and the production of, minerals, oil, gas, and geothermal energy which are economically beneficial to the state. This is the Nevada Division of Minerals' public platform for exploring and downloading our open data.

Disclaimer

The Nevada Division of Minerals (NDOM hereafter) assumes no responsibility for errors or omissions. No warranty is made by NDOM as to the accuracy, reliability, or completeness of these data for individual use or aggregate use with other data; nor shall the act of distribution to contractors, partners, or beyond, constitute any such warranty for individual or aggregate data use with other data. In no event shall NDOM have any liability whatsoever for payment of any consequential, incidental, indirect, special, or tort damages of any kind, including, but not limited to, any loss of profits arising out of the use or reliance on this data.

Our open data site provides Nevada Centric free downloadable data for:

- ☆ Current & Historic mining claims
- 🖄 Current & Historic plans & notices
- 🖄 Dissolved mineral resources
- ☆ Oil/Gas & Geothermal Leases
- Mineral production (Metals, Nonmetals, Oil, Gas & Geothermal)
- ☆ Mineral occurrences
- ☆ Public land Issues
- Solar, Wind & Electrical Transmission ROW's
- 🛠 Education and outreach videos and materials

The C.L.A.I.M.S. Hub Site – The NV Data Miner

- ☆ This is a platform for exploring and downloading free Mining Claims, Plan, and Notice GIS data.
- ☆ Unpatented mining claims, plans and notices are presented in this map on a per quartersection or per-section basis for Arizona, California, Colorado, Idaho, Montana, Nevada, New Mexico, Oregon, Utah, Washington, and Wyoming.
- ☆ All maps are interactive with feature pop-ups designed to guide the user to the appropriate places to view data and run queries.
- ☆ The user can also add their own data to the map.
- ☆ This website is new, and it is anticipated that it will be improved upon as time allows.

Thank you New Frontier Drilling). Also thanks to Foster for the inspiration, Mike for all the guidance, and to all of my co-workers and fellow professionals for your advice, input, and edits!

This is a platform for exploring and downloading Mining Claims, Plan, and Notice GIS data. Unpatented mining claims, plans and notices are presented in this map on a per quarter section basis for Arizona, California, Colorado, Idaho, Montana, Nevada, New Mexico, Oregon, Utah, Washington, and Wyoming. **THE OUARTER SECTION FABRIC HAS BEEN CALCULATED AND DOES NOT REPRESENT ACTUAL PLSS BOUNDARIES. THIS REPRESENTATION IS NEW AND THE DEVELOPER WOULD APPRECIATE FEEDBACK IF ANY MAJOR DISCREPANCIES ARE ENCOUNTERED.** All maps are interactive with feature pop-ups designed to guide the user to the appropriate places to view data and run queries. The user can also add their own data to the map. This website is new and it is anticipated that it will be improved upon as time allows. The developer is donating time to keep the site up and going, so updates will be as time allows, but it is our goal to update the data at least once a month.

Please review the information icon in the map to read all disclosures and use limitations.

Data downloads and <u>links to state data resources</u> can be found towards the bottom of the page. Each state has provided links to data or web applications thought to be most important for explorationists.

Mineral Rights Story Map

A Quick Tour

Mineral Rights Story Map

Mineral Rights Explorer

Step 1. Mineral Rights Overview Step 2. Get Township-Range-Section Description Step 3. Find Location - View MTP Step 4. View Land Catalog Step

This is the landing page for the BLM's Land Catalog. This is a very helpful tool when doing land research. The General Land Office (GLO) Reference Section is full of information and is worth reviewing to understand this platform.

In the tool bar located at the top of the right-hand side of the map, select the state and start to enter the PLSS description. Type the PLSS description in the following format, a list will again appear and begin to populate as you type.

T15N R48E Sec 23 = 150N 480E Be aware: partial townships aren't obvious, users may only see two listings for the same township.

Select the section from the drop down after you have selected the township. The map will automatically pan to the section.

You will notice at the top of the screen a ribbon will expand displaying: Maps, Patents, Survey, LSR, CDI, Case Recordation, and Status (These are defined below).

Click on the patents tab. In the Accession column find and click on the number associated with your parcel (the Serial/Patent/Order number you obtained from the MTP).

Mineral Rights - An Overview

Please review this story map in its entirety before you click on Step 2 or topics discussed in steps 2-5 will not make sense.

Lucia Patterson, Nevada Division of Minerals

Minerals Rights

Mineral rights include oil, gas, geothermal, metals, and industrial minerals.

When it comes to mineral rights research, the approach will depend on how important it is to figure out mineral rights on the property of interest. Establishing mineral title can take a considerable amount of time and therefore a considerable amount of money.

Multiple Use Conflicts

<u>A Quick Tour</u>

General Information - PLEASE READ!

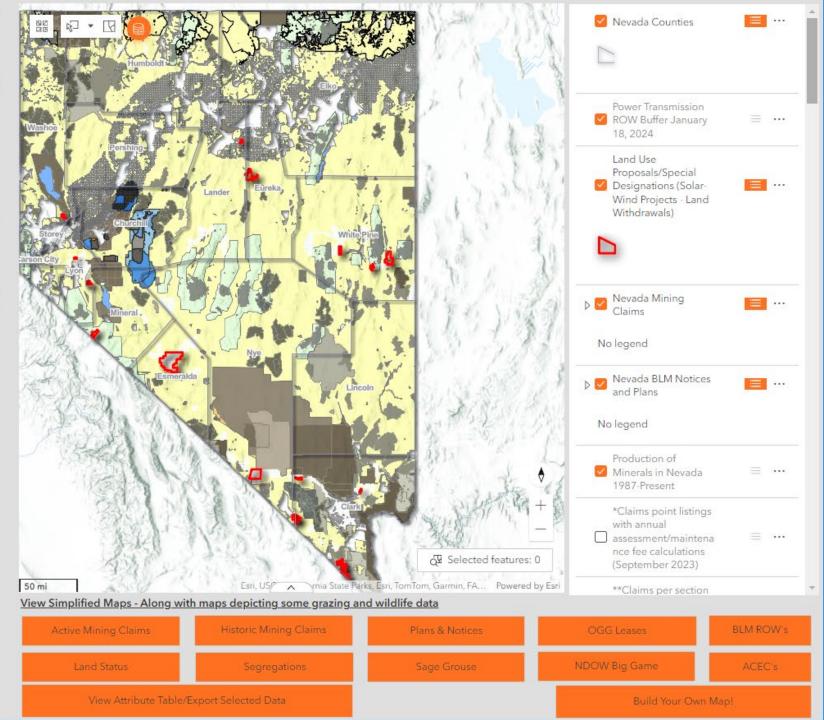

Claim data is presented on a per quarter section basis. If a claim falls in more than one quarter section it will have more than one listing. Therefore, counts and sums for areas selected/filtered will be <u>more than the actual value</u>.

There are <u>several layers</u> in this map, please visit the "Map Layers" tab and turn off any unnecessary layers to your analysis to simplify the view.

Filtering the Data

Click on the "Filter the data" tab above. Click on the data category you want to analyze then choose the filter type. You can either use "Selecting features from the data source", select the layer you want to filter on from the second drop down, and then simply click on the map (The only way in mobile view) or use the select tool located in the map (square with an arrow) and pick the area you wish to analyze, or use the "drawn graphic" to draw your own area. Apply buffers as needed.

After filtering the data, you can export the results to a .csv file by clicking on the 4 circles in the upper right hand corner of the list. On the data tab in Excel, choose remove duplicates and use the "SerialNumber" field to remove duplicates. You can also export the data to a GeoJSON file and add to ArcGIS or QGIS

C
